Art Unit: 3681

DETAILED ACTION

1. This is the first Office Action on the merits of Application No. 10/720,168 filed on 11/25/03.

2. Receipt is acknowledged of the Preliminary Amendment filed on 11/25/03. Claims 1-4 have been canceled accordingly. Claims 5-7 are currently pending.

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- 4. Claims 5-7 are rejected under 35 U.S.C. 102(b) as being anticipated by Sommer (US 3,696,898).

Sommer teaches a clutch changeover method for changing over clutches in a change-speed apparatus having a direct coupling clutch (126, 130) and a change-speed clutch (128, 134) which are disposed on a movable element (194) provided concentrically with an input shaft (44) which power is transmitted, said movable element being adapted to move along an axial direction of said input shaft, and an elastic body (172) and an actuator (198) both for changing over a state between engagement and disengagement of said direct coupling clutch or said change-speed clutch, said elastic body and said actuator being disposed such that operations of

Art Unit: 3681

said elastic body and said actuator are opposed to each other in the axial direction, said clutch changeover method comprising the steps of:

keeping said change-speed clutch (128, 134) in engagement by normally moving said movable element (194) in one direction (i.e., to the left) by virtue of a biasing force of said elastic body (172); and

changing over the engagement of said clutches from said change-speed clutch (128, 134) to the direct coupling clutch (126, 130) by moving said movable element (194) against the biasing force of said elastic body (172) by activating said actuator (198).

Regarding claim 6, wherein said change-speed clutch (128, 134) is kept in engagement by normally moving said movable element (194) to the left by virtue of a biasing force of said elastic body (172), and wherein the engagement of said change-speed clutch (128, 134) is released by moving said movable element (194) against the biasing force of said elastic body (172) while bringing the direct coupling clutch (126, 130) into engagement by activating said actuator (198).

Regarding claim 7, wherein said change-speed clutch (128, 134) is kept in engagement by normally moving said movable element (194) to the left by virtue of a biasing force of said elastic body (172), and wherein said direct coupling clutch (126, 130) is brought into engagement after the engagement of said change-speed clutch (128, 134) has been released by moving said movable element (194) to the right against the biasing force of said elastic body (172) by activating said actuator (198).

Art Unit: 3681

Cited Prior Art

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure: Massaccesi'639, Rockwell'655, Sommer et al.'872, Liu'990, Miller'664, and Sherman'147 which each shows a transmission having a clutch and brake mechanism.

Communication

6. Submission of your response by facsimile transmission is encouraged. The fax phone numbers for the organization where this application or proceeding is assigned are (703) 872-9326 for regular communications and (703) 872-9327 for After Final communications. Recognizing the fact that reducing cycle time in the processing and examination of patent applications will effectively increase a patent's term, it is to your benefit to submit responses by facsimile transmission whenever permissible. Such submission will place the response directly in our examining group's hands and will eliminate Post Office processing and delivery time as well as the PTO's mail room processing and delivery time. For a complete list of correspondence not permitted by facsimile transmission, see M.P.E.P. 502.01. In general, most responses and/or amendments not requiring a fee, as well as those requiring a fee but charging such fee to a deposit account, can be submitted by facsimile transmission. Responses requiring a fee which applicant is paying by check should not be submitting by facsimile transmission should include a Certificate of Transmission (M.P.E.P.. 512). The following is an example of the format the certification might take:

I hereby certify that this corre	spondence is being facsimile transmitted to
the Patent and Trademark Off	ice on
	(Date)
Typed or printed name of pers	son signing this certificate:
(Signature)	

If your response is submitted by facsimile transmission, you are hereby reminded that the original should be retained as evidence of authenticity (37 CFR 1.4 and M.P.E.P.. 502.02). Please do not separately mail the original or another copy unless required by the Patent and Trademark Office. Submission of the original response or a follow-up copy of the response after your response has been transmitted by facsimile will only cause further unnecessary delays in the processing of your application; duplicate responses where fees are charged to a deposit account may result in those fees being charged twice.

Art Unit: 3681

Any inquiry concerning this communication or earlier communication from the examiner should be directed to Examiner Ho whose telephone number is (703) 305-0738. The examiner can normally be reached on Monday-Friday from 7:30 A.M. to 5:00 P.M. Eastern Standard Time. If attempts to reach the examiner by phone are unsuccessful, the examiner's supervisor, Mr. Charles Marmor, can be reached at (703) 308-0830. Any inquiry of a general nature or relating to the status of this application or proceeding should directed to the Group receptionist whose telephone number is (703) 308-2168.
